---Overview of Content---

AAC

- **Table of AAC Contents:** This list details the specific AAC resources that apply to this practice.
- **What is AAC:** A quick summary of salient features of the evidence-based practice, including what it is, who it can be used with, what skills it has been used with, and settings for instruction.
- **Evidence-base:** The evidence-base details the National Clearinghouse on Autism Evidence and Practice (NCAEP) criteria for inclusion as an evidence-based practice and the specific studies that meet the criteria for this practice.
- **Planning Checklist:** This checklist details the steps for planning for this practice, including what prerequisite learning of practices are needed, collecting baseline data of the target goal/behavior/skill if needed, and what materials/resources are needed.
- **Other Resources:** Other resources may include decision trees, checklists, and/or template forms that will support the use of this practice.
- **Step-by-Step Guide:** Use this guide as an outline for how to plan for, use, and monitor this practice. Each step includes a brief description as a helpful reminder while learning the process.
- **Implementation Checklist:** Use this checklist to determine if this practice is being implemented as intended.
- **Data Collection Form(s):** Use this form as a method for collecting and analyzing data to determine if the learner with autism is making progress towards the target goal/behavior/skill.
- **Tip Sheet for Professionals:** Use this tip sheet, intended for professionals working with learners with autism, as a supplemental resource to help provide basic information about this practice.
- **Parent Guide:** Use this guide intended for parents or family members of learners with autism to help them understand basic information about this practice and how it is being used with their child.
- **Additional Resources:** This list provides additional information for learning more about this practice as well as resources.
- **CEC Standards:** This list details the specific CEC standards that apply to this practice.
- **Glossary:** This glossary contains key terms that apply specifically to this practice.
- **References:** This list details the specific references used for developing this AAC module in numerical order.

---Augmentative & Alternative Communication---

WHAT IS AUGMENTATIVE & ALTERNATIVE COMMUNICATION?

Augmentative and alternative communication (AAC) are interventions that use a system of communication that is not verbal/vocal including aided and unaided communication systems. Methods of teaching AAC use are also included in this practice (e.g., Aided Language Modeling) and may include other EBPs such as prompting, reinforcement, visual supports, and peer-mediated interventions.

EVIDENCE-BASE:

Based upon the 2020 systematic review conducted by the National Clearinghouse on Autism Evidence and Practice (NCAEP), this practice is a focused intervention that meets the evidence-based practice criteria with 47 single case design studies. This practice has been effective for early intervention (0-2 years), preschoolers (3-5 years), elementary school learners (6-11 years), middle school learners (12-14 years), and high schoolers (15-18 years) with autism. Studies included in the 2020 EBP report (Steinbrenner et al., 2020) detail how this practice can be used to effectively address the following outcomes for a target goal/behavior/skill: academic/pre-academic, challenging/interfering behavior, communication, joint attention, motor, play, and social.

HOW IS AAC BEING USED?

This practice can be used by a variety of professionals, including teachers, special educators, therapists, paraprofessionals, and early interventionists in educational and community-based environments. Parents and family members also can use this practice in the home.

---Evidence-base---

The National Clearinghouse on Autism Evidence and Practice has adopted the following criteria to determine if a practice is evidence-based. The 2020 EBP report (Steinbrenner et al., 2020) provides more information about the systematic review process.

Efficacy must be established through high-quality, peer-reviewed research in scientific journals using:

- At least 2 randomized or quasi-experimental group design studies, or
- At least 5 single subject/case design studies, or a
- Combination of evidence of 1 randomized or quasi-experimental group design study **and** 3 single subject/case design studies

OVERVIEW:

Based upon the 2020 systematic review conducted by the National Clearinghouse on Autism Evidence and Practice (NCAEP), this practice is a focused intervention that meets the evidence-based practice criteria with 47 single case design studies. This practice has been effective for early intervention (0-2 years), preschoolers (3-5 years), elementary school learners (6-11 years), middle school learners (12-14 years), and high schoolers (15-18 years) with autism. Studies included in the 2020 EBP report (Steinbrenner et al., 2020) detail how this practice can be used to effectively address the following outcomes for a target goal/behavior/skill: academic/pre-academic, challenging/interfering behavior, communication, joint attention, motor, play, and social.

In the table below, the instructional outcomes identified by the evidence base are shown by age of participants.

EVIDENCE-BASE:							
	ACADEMIC	CHALLENGING	COMMUNICATION	JOINT ATTENTION	MOTOR	PLAY	SOCIAL
0-2			Yes	Yes		Yes	Yes
3-5	Yes	Yes	Yes	Yes		Yes	Yes
6-11	Yes	Yes	Yes	Yes		Yes	Yes
12-14			Yes				
15-18			Yes		Yes		Yes

- *Strasberger, S. K., & Ferreri, S. J. (2014). The effects of peer assisted communication application training on the communicative and social behaviors of children with autism. *Journal of Developmental and Physical Disabilities, 26*(5), 513-526. <https://doi.org/10.1007/s10882-013-9358-9>

HIGH SCHOOL (15-18 YEARS):

- Hughes, C., Bernstein, R. T., Kaplan, L. M., Reilly, C. M., Brigham, N. L., Cosgriff, J. C., & Boykin, M. P. (2013). Increasing conversational interactions between verbal high school students with autism and their peers without disabilities. *Focus on Autism and Other Developmental Disabilities, 28*(4), 241-254. <https://doi.org/10.1177/1088357613487019>
- Kagohara, D. M., van der Meer, L., Achmadi, D., Green, V. A., O'Reilly, M. F., Mulloy, A., Lancioni, G.E., Lang, R., & Sigafoos, J. (2010). Behavioral intervention promotes successful use of an iPod-based communication device by an adolescent with autism. *Clinical Case Studies, 9*(5), 328-338. <https://doi.org/10.1177/1534650110379633>

YOUNG ADULT (19-22 YEARS):

No studies as of the 2020 EBP Report

Note: * denotes the study has participants in at least two age ranges; **new studies since 2011 (2012 till 2017) are denoted in bold**

---Types of AAC---

AAC

Learn more about the types of AAC to support your understanding of this evidence-based practice.

For more information, please visit <https://afirm.fpg.unc.edu/>.

UNAIDED COMMUNICATION SYSTEMS:

Does not use any materials or technology, only a motion of your body (e.g., sign language and gestures)

- **Conventional gestures:** Communicative gestures used and understood by most members of a social group. In the United States, these include actions such as shoulder shrugging, head nodding/shaking, pointing, thumbs up/down, and high fives.
- **American Sign Language (ASL):** A complete natural language comprised of facial expressions and hand/finger movements with the same linguistic characteristics of spoken language, often used by the deaf/hard of hearing community.
- **Informal sign use** (for example, “Baby signing”): A set of simple hand gestures and movements designed to enhance communication for children who do not use much or any spoken language. May contain single word signs from ASL but not grammatical aspects of that language. May also include gestures that are unique and only understood by the child and their common communication partners.

LOW-TECH AIDED COMMUNICATION SYSTEMS:

Aided systems that use some type of material or device. They include *low-tech systems* (e.g., exchanging objects/ pictures or pointing to letters) and extend to *mid-tech and high-tech speech generating devices* (SGDs) and applications that allow other devices (i.e., phones, tablets) to serve as SGDs.

- **Picture Exchange Communication System (PECS):** a formal evidence-based system of augmentative communication using picture exchange of standard images that represent words.
- **Communication books & boards:** Object choice board, choice board using photographs of objects/events, communication book using photographs, simple communication board using photographs, or complex communication book using symbols and letters.

SPEECH GENERATING AIDED COMMUNICATION SYSTEMS:

Aided systems that use some type of material or device. They include *low-tech systems* (e.g., exchanging objects/ pictures or pointing to letters) and extend to *mid-tech and high-tech speech generating devices* (SGDs) and applications that allow other devices (i.e., phones, tablets) to serve as SGDs.

- **Communication buttons/switches, Speech generating keyboard, Speech generating communication boards, Speech generating device, Speech generating application on a tablet**

---Assessment Checklist Worksheet---

Learner's Name: _____ Date/Time: _____

Observer(s): _____

Target Goal/Behavior/Skill (short): _____

Directions: Complete this worksheet to determine if an assessment for AAC is needed

AAC SPECIFIC PLANNING:

1. Is the learner making little progress toward communication goals during academic or social parts of the school day?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
2. Is the learner showing frustration or other negative behaviors when there are communication demands placed on them during the school day?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
3. Do the learner's teachers, family, and/or peers have a hard time understanding the learner's current communication or spoken language?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
4. Does the learner seem interested in participating in activities or communicating with others but lack the language to do so effectively?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
5. Does the learner show little engagement in daily activities or seem withdrawn?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
6. Has the learner's family mentioned communication concerns or the desire for the student to have more effective communication?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
7. Does the learner seem to have matured beyond their current AAC system?	<input type="checkbox"/> Yes	<input type="checkbox"/> No

If you answered yes to any of these questions, then the learner may need a more thorough assessment with your school speech-language pathologist or assistive technology specialist.

ANECDOTAL NOTES:

---Data Collection: Observations---

Learner's Name: _____ Date/Time: _____

Observer(s): _____

Target Goal/Behavior/Skill: _____

Directions: Collect data observations on the learner's communication behaviors.

IDENTIFY COMMUNICATION BEHAVIORS:

Time	Activity	Communication Partner	Communication Behavior Observed
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	

---Visual Support: Feelings---

Learner's Name: _____

Date/Time: _____

Observer(s): _____

Target Goal/Behavior/Skill: _____

Directions: Use these visual supports to help the learner indicate their feelings or preferences for various communication systems or devices.

Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree

	Strongly Dislike
	Dislike
	Undecided
	Like
	Love

---Family Considerations---

Learner's Name: _____ Date/Time: _____

Observer(s): _____

Target Goal/Behavior/Skill: _____

Directions: Use this sheet to guide discussion about AAC during a family meeting.

AAC CONSIDERATIONS FROM FAMILY:

1. What are your hopes for the AAC device and your child's communication? Can we set some goals together and work on them both at home and at school?

2. Who is with the child most while they are at home? What types of activities does the child participate in outside of school? Who would be the best person to be trained to program the device for home use? Who interacts with the child and will need basic training on what to expect?

3. What kinds of technology do you use in your home? Who uses these devices? Who does not use them? Are there people who are more/less comfortable with technology and how can we make sure all of them can communicate with the child?

4. Do you have rules about screen time and technology use at home? Can we talk about parental controls on the device and other ways to ensure your child is not misusing the device and still following your house rules? Can we troubleshoot ways to tell the other children in your home that the AAC device is different than screen time?

5. Can you think of a good place in your home to store and charge the device when it is not being used? Is this place safe from pets and other potential hazards?

6. What are your biggest concerns about the AAC device? Can we troubleshoot those concerns together and come up with a plan?

---Communicative Goals Plan---

Learner's Name: _____ Date/Time: _____

Observer(s): _____

Target Goal/Behavior/Skill: _____

Directions: Identify communicative goals for the learner and plan for which setting(s) and communication partner the learner will work on these goals in/with.

IDENTIFY TIMES TO USE AAC SYSTEM:

Communicative Goal/Function	Setting/Activity	Communication Partner
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____

---R+ Checklist & Sampling---

Learner's Name: _____ Date/Time: _____

Observer(s): _____

Target Goal/Behavior/Skill: _____

Directions: Use this checklist to select reinforcers/rewards based on the learner's preferred items, interests, and activities.

CONDUCT A REINFORCER SAMPLING:

1. Sit in front of the learner and hold up two items. Ask the learner to "Pick one."
2. Wait 10 seconds for the learner to indicate selection in manner that is appropriate for the learner (e.g., verbalization, pointing, using an augmentative communication device).
3. Place the selected object in a container for learner's selection and non-selected item in the not selected container.
4. Repeat steps 1 through 3 until half of the objects presented are selected.

Item 1	Selection	Item 2	Selection
	<input type="checkbox"/> Yes <input type="checkbox"/> No		<input type="checkbox"/> Yes <input type="checkbox"/> No
	<input type="checkbox"/> Yes <input type="checkbox"/> No		<input type="checkbox"/> Yes <input type="checkbox"/> No
	<input type="checkbox"/> Yes <input type="checkbox"/> No		<input type="checkbox"/> Yes <input type="checkbox"/> No
	<input type="checkbox"/> Yes <input type="checkbox"/> No		<input type="checkbox"/> Yes <input type="checkbox"/> No
	<input type="checkbox"/> Yes <input type="checkbox"/> No		<input type="checkbox"/> Yes <input type="checkbox"/> No
	<input type="checkbox"/> Yes <input type="checkbox"/> No		<input type="checkbox"/> Yes <input type="checkbox"/> No
	<input type="checkbox"/> Yes <input type="checkbox"/> No		<input type="checkbox"/> Yes <input type="checkbox"/> No
List:			

GENERAL CHECKLIST:		
Consider...	List Potential Reinforcers	Age Appropriate
1. What natural reinforcers could be used?		<input type="checkbox"/> Yes
2. What activities, objects, and/or foods does the learner select independently?		<input type="checkbox"/> Yes
3. What phrases or gestures seem to produce a pleasant response from the learner?		<input type="checkbox"/> Yes
4. What does the learner say they would like to work for (if appropriate)?		<input type="checkbox"/> Yes
5. What reinforcers were identified by parents/family members and/or team members as being successful in the past?		<input type="checkbox"/> Yes
6. Does the learner require additional adaptations/modifications/supports? Such as visual supports or a communication device?		<input type="checkbox"/> Yes
7. Have reinforcers/rewards for the learner been identified based on the learner's interests/preferred items and/or activities?		<input type="checkbox"/> Yes
8. Are additional materials and/or resources for using this selected practice ready and available?		<input type="checkbox"/> Yes

SPECIFIC CHECKLIST:		
Foods for Snacks/Mealtime Routines:		
<input type="checkbox"/> Goldfish	<input type="checkbox"/> French Fries	<input type="checkbox"/> Ice Cream
<input type="checkbox"/> Pizza	<input type="checkbox"/> Pretzels	<input type="checkbox"/>
<input type="checkbox"/> Chicken Nuggets	<input type="checkbox"/> Chips	<input type="checkbox"/>
<input type="checkbox"/> Fruit	<input type="checkbox"/> Cheese	<input type="checkbox"/>
Games for Play/Recess Routines:		
<input type="checkbox"/> Peek-a-boo	<input type="checkbox"/> Pat-a-Cake	<input type="checkbox"/>
<input type="checkbox"/> Chase	<input type="checkbox"/> Tickle games	<input type="checkbox"/>
<input type="checkbox"/> Burrito games with a blanket	<input type="checkbox"/>	<input type="checkbox"/>
Toys for Play/Recess Routines:		
<input type="checkbox"/> Trains and Cars	<input type="checkbox"/> Computer	<input type="checkbox"/> Books
<input type="checkbox"/> Legos	<input type="checkbox"/> Puzzles	<input type="checkbox"/>
<input type="checkbox"/> Remote controls	<input type="checkbox"/> Noisy toys	<input type="checkbox"/>
<input type="checkbox"/> Phones	<input type="checkbox"/> Doll house	<input type="checkbox"/>
Special Interests for Activities/Routines:		
<input type="checkbox"/> Movie:	<input type="checkbox"/> TV Show:	<input type="checkbox"/> Real-Life Person:
<input type="checkbox"/> Movie Character:	<input type="checkbox"/> TV Show Character:	<input type="checkbox"/> Video Game:
<input type="checkbox"/> Letters	<input type="checkbox"/> Cars, Trains, Trucks	<input type="checkbox"/> Music
<input type="checkbox"/> Numbers	<input type="checkbox"/> Dinosaurs	<input type="checkbox"/> Computers/Technology
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

---Prompting Hierarchy---

Learner's Name: _____ **Date/Time:** _____

Observer(s): _____

Target Goal/Behavior/Skill: _____

Directions: Use this checklist to determine order of prompts based on the learner's needs and the target skill.

PROMPTS:

- **Gestural** – a physical movement that provides the learner with information about how to perform the target skill/behavior
- **Independent** – the learner is able to perform the target skill/behavior without assistance or support from others
- **Model** – demonstrating the correct way to perform the target skill/behavior for the learner
- **Physical** – hands-on assistance given to the learner to support them to perform the target skill/behavior
- **Verbal** – any spoken words direct to the learner to help them perform the target skill/behavior
- **Visual** – a picture, icon, or physical object used to provide the learner with information on how to perform the target skill/behavior

DETERMINE PROMPT ORDER:		
Level	Prompt	Instructions
Level 1	Independent	
Level 2		
Level 3		
Level 4		
Level 5		
Level 6		

---Planning Checklist---

Learner's Name: _____ **Date/Time:** _____

Observer(s): _____

Target Goal/Behavior/Skill (short): _____

Directions: Complete this checklist to determine if this is an appropriate practice to use with the learner with autism as well as if this practice is ready to be implemented.

GENERAL PLANNING:		
1. Has the target goal/behavior/skill been identified?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
2. Has baseline data and/or a functional behavior assessment been collected through direct observation of the learner?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
3. Is the target goal/behavior/skill measurable and observable? Does it clearly state what the target goal/behavior/skill is, when it will occur, and how team members/observers will know it has been mastered?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
4. Is this selected practice appropriate for the learner's target goal/behavior/skill?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
5. Does the learner have needed prerequisite skills/abilities?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
6. Does the learner require additional adaptations/modifications/supports? Such as visual supports or a communication device?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
7. Have reinforcers/rewards for the learner been identified based on the learner's interests/preferred items and/or activities?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
8. Are additional materials and/or resources for using this selected practice ready and available?	<input type="checkbox"/> Yes	<input type="checkbox"/> No

AAC SPECIFIC PLANNING:		
1. Is the learner making little progress toward communication goals during academic or social parts of the school day?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
2. Is the learner showing frustration or other negative behaviors when there are communication demands placed on them during the school day?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
3. Do the learner's teachers, family, and/or peers have a hard time understanding the learner's current communication or spoken language?	<input type="checkbox"/> Yes	<input type="checkbox"/> No

4. Does the learner seem interested in participating in activities or communicating with others but does not have the language to do so effectively?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
5. Does the learner show little engagement in daily activities or seem withdrawn?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
6. Has the learner's family mentioned communication concerns or the desire for the student to have more effective communication?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
7. Does the learner seem to have matured beyond their current AAC system?	<input type="checkbox"/> Yes	<input type="checkbox"/> No

IDENTIFY COMMUNICATION BEHAVIORS:

Time	Activity	Communication Partner	Communication Behavior Observed
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	
		<input type="checkbox"/> Teacher <input type="checkbox"/> Para <input type="checkbox"/> Peer <input type="checkbox"/> Other: _____	

AAC CONSIDERATIONS FROM FAMILY:

1. What are your hopes for the AAC device and your child's communication? Can we set some goals together and work on them both at home and at school?
2. Who is with the child most while they are at home? What types of activities does the child participate in outside of school? Who would be the best person to be trained to program the device for home use? Who interacts with the child and will need basic training on what to expect?

	<input type="checkbox"/> Teacher <input type="checkbox"/> Peer <input type="checkbox"/> Para <input type="checkbox"/> Other: _____		

Prompt Key: V = Verbal; G = Gestural; M = Model; P = Physical; I = No prompts needed/Independent

ANECDOTAL NOTES:

---Data Collection: Across Settings---

Learner's Name: _____ Date/Time: _____

Observer(s): _____

Target Goal/Behavior/Skill: _____

Directions: Collect data on the use of the AAC device across settings.

MONITORING DATA:		
Setting	AAC Used?	Notes
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	

---Monitoring Progress Checklist---

Learner's Name: _____ **Date/Time:** _____

Observer(s): _____

Target Goal/Behavior/Skill (short): _____

Directions: Complete this checklist to determine if the learner is making progress to the target goal/behavior/skill with this practice.

GENERAL MONITORING:

1. Has the learner achieved the target goal/behavior/skill?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
2. Is the target goal/behavior/skill measurable and observable? Does it clearly state what the target goal/behavior/skill is, when it will occur, and how team members/observers will know it has been mastered?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
3. Is the target goal/behavior/skill too difficult/complex? Does it need to be broken down into smaller steps?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
4. Has enough time been devoted to using this practice (frequency, intensity, and/or duration)?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
5. Was this practice implemented with fidelity?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
6. Does the learner require additional adaptations/modifications/supports? Such as visual supports or a communication device?	<input type="checkbox"/> Yes	<input type="checkbox"/> No

MONITORING DATA:

Activity	Communication Partner	Comment Opportunities (Tally each opportunity)	Support/Prompts Needed
	<input type="checkbox"/> Teacher <input type="checkbox"/> Peer <input type="checkbox"/> Para <input type="checkbox"/> Other: _____		
	<input type="checkbox"/> Teacher <input type="checkbox"/> Peer <input type="checkbox"/> Para <input type="checkbox"/> Other: _____		
	<input type="checkbox"/> Teacher <input type="checkbox"/> Peer <input type="checkbox"/> Para <input type="checkbox"/> Other: _____		

	<input type="checkbox"/> Teacher <input type="checkbox"/> Para	<input type="checkbox"/> Peer <input type="checkbox"/> Other: _____		
	<input type="checkbox"/> Teacher <input type="checkbox"/> Para	<input type="checkbox"/> Peer <input type="checkbox"/> Other: _____		

MONITORING DATA:		
Setting	AAC Used?	Notes
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	
	<input type="checkbox"/> Yes <input type="checkbox"/> No	

AAC REFLECTION:

1. How do you think that went?		
2. Did you encounter any challenges implementing AAC or other EBP strategies?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
3. At which points did you see strategies working?		
4. What could you have done differently?		
5. Did you feel comfortable implementing the AAC strategies?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
6. Did the learner respond positively to naturally occurring reinforcers?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
7. Did the learner seem to enjoy the activities?	<input type="checkbox"/> Yes	<input type="checkbox"/> No

ANECDOTAL NOTES:

---Troubleshooting Guide---

Learner's Name: _____ Date/Time: _____

Observer(s): _____

Target Goal/Behavior/Skill (short): _____

Directions: Use this guide to address issues with the learner using AAC.

Learner is only communicating when prompted

- Use time delay to reduce prompt reliance.
- Interpret the learner's nonverbal communication and use modeling to demonstrate use of the device. For example, teacher says, "I see you reaching. You want that. Here's how you can tell me." This method teaches the learner the power of their communication.
- Model symbolic representations throughout the school day to increase receptive understanding. For example, the teacher may model bead patterns during math and say which beads are the same/different as the one before while pointing to the words on the learner's device to make this abstract concept symbolically represented.

Learner is only communicating in one context

- Think of what is so motivating in that context and see if it can transfer to another setting.
- Increase use of reinforcement for communicating in other settings.
- Check in with teachers in other contexts to make sure they are using and reinforcing AAC.

Learner is only communicating with adults

- Train peers to prompt and reinforce the student for communicating.

Learner is refusing to use their device

- Reduce the number of word choices displayed. Simplify the demands placed on the student.
- Use motivating reinforcers.
- Monitor other reasons why the student may resist the device – think about sensory components like how heavy it is, what sounds it makes, etc.

Communication device is not working

- Make sure the device is charged and all software is updated.
- Power down the device for a few minutes and try again.
- Call the tech support specialist for the device or the local device representative.

Learner is using the device for purposes other than communication

- Use reinforcement or other EBPs to promote appropriate use of the device for communicating.

---Step-by-Guide---

This step-by-step practice guide outlines how to plan for, use, and monitor this practice.

BEFORE YOU BEGIN...

Each of the following points is important to address so that you can be sure this selected evidence-based practice is likely to address the target goal/behavior/skill of your learner with autism.

HAVE YOU FOUND OUT MORE INFORMATION ABOUT...?

- Identifying the target goal/behavior/skill...?
- Collecting baseline data through direct observation...?
- Establishing a target goal or outcome that clearly states when the behavior will occur, what the target goal or outcome is, and how team members and/or observers will know when the skill is mastered...?

If the answer to any of the above questions is 'No,' review the process of how to select an appropriate AAC (<https://afirm.fpg.unc.edu/selecting-ebp>).

For more information about this selected evidence-based practice, please visit <https://afirm.fpg.unc.edu/>.

Keep in mind that this selected practice can be used to increase student communication, socialization, and engagement while reducing interfering behaviors.

STEP 1: PLANNING FOR AAC

The planning step details the initial steps and considerations involved to prepare for using this practice with a learner with autism.

1.1 Determine if an assessment for AAC is needed

If the learner does not yet verbally communicate or has limited spoken language, using AAC may be appropriate. The learner may need a thorough assessment with a speech-language pathologist or assistive technology specialist.

- 📄 *Use the Assessment for AAC Checklist to help you determine if an assessment for AAC is needed.*

1.2 Conduct an AAC assessment

Typically, a speech-language pathologist takes the lead on conducting a formal AAC assessment. Other team members contribute valuable information to inform the assessment process.

- 📄 *Use the Data Collection: Observation sheet to document observations on the learner's communication behaviors.*

1.3 Discuss tech and AAC preferences

The learner's family and the learner are important members of the AAC team. Discussing their technology and AAC preferences allows the team to plan for appropriate AAC use across school and home settings.

- 📄 *Use the Visual Support: Feelings sheet to determine the learner's feelings about various AAC devices.*
- 📄 *Use the Family Considerations sheet as a discussion guide during a family meeting about AAC.*

1.4 Identify available AAC resources

The learner may need to borrow or purchase an AAC device. Speech-language pathologists who provide AAC services will be familiar with available funding options.

- Low tech systems can be created by the SLP and typically do not need funding.
- High tech systems are considered durable medical equipment (DME) and may be covered by insurance.
- If the learner's IEP indicates the need for an AAC device, the school system may cover the cost of the device.

STEP 1: PLANNING FOR AAC (CONTINUED)

1.5 Select EBPs for teaching use of the AAC system

The following evidence-based practices may be needed to teach a learner to use their AAC system.

- Modeling (MD)
- Peer-based instruction & intervention (PBII)
- Prompting (PP)
- Reinforcement (R+)
- Time delay (TD)
- Visual supports (VS)

1.6 Plan opportunities for learner to use AAC

Carefully review the learner's daily activities and social interactions to plan opportunities for them to use their AAC system. The goal is for AAC learning and opportunities to be happening all day, every day.

- 📖 *Use the Communicative Goals Plan guide to determine times and communicative goals for the learner.*

1.7 Identify and train team members

Once the AAC system is ready for use, train the learner, their communication partners and team members on the use of the device. Set up the school environment for success by preparing everyone at school who interacts with the student to support the use of the AAC device.

1.8 Prepare materials

Prepare materials for either low tech or high-tech systems. Also prepare the data collection form, prompting hierarchy and reinforcers.

- Low tech systems:
 - Select objects or print symbols or photos used on switches or in communication books
 - Select the format for a communication book
 - Organize communication book, board, switches with the correct vocabulary for each class or activity
- High tech devices:
 - Device case and screen protector
 - Tracking application in case device is lost
 - Program the device
 - Vocabulary selection to meet the student's needs throughout the day

- 📖 *Use the Planning Checklist to determine if you are ready to use AAC.*

STEP 2: USING AAC

This step details the process of implementing this practice with a learner with autism.

2.1 Teach the learner to use the AAC system

When teaching the learners to use the AAC system, keep in mind:

- the whole team should collaborate to ensure the AAC system teaching is consistent across settings
- the teaching environments noted on the Communicative Goals Plan
- the EBPS selected to support the learner's goals

2.2 Understand formalized AAC teaching approaches

In addition to using identified EBPs, a speech-language pathologist may also use a formalized AAC teaching approach. Not all approaches are recognized as evidence-based practices but may have some evidence to support them.

2.3 Reinforce the learner for using their AAC device

Some learners may benefit from reinforcement for communication goals that are less motivating. Remember the basic rules of reinforcement.

- Be consistent with the schedule of reinforcement.
- Remind the student what they are working toward.
- Provide reinforcement immediately when the student uses the target skill (or after the token reinforcement goal is reached).
- Vary the types of reinforcers used.

2.4 Ensure consistent device usage

The learner's AAC system must travel with the student wherever they go to ensure it is used across contexts. The device should be portable, available at all times, and other people in the environment should be aware of its use.

STEP 3: MONITORING AAC

The following step details how to monitor the use of this practice with a learner with autism and how to determine next steps based on the data.

3.1 Collect and analyze data

Collect and analyze data on the student's use of AAC by goal. Be sure to monitor:

- The number of opportunities to communicate
- Who the communication partner is
- How much support the learner needs to use the device

 *Use the Data Collection Form to collect data and monitor learner progress.*

STEP 3: MONITORING AAC (CONTINUED)

3.2 Monitor use of the AAC system across settings

Collect information from the learner's family, peers, other teachers, or the student to monitor AAC use across the day.

- 📄 *Use the Data Collection Form: Across Setting to collect data on the use of the AAC system across settings.*
- 📄 *Use the Monitoring Progress Checklist to support your understanding of collected data and determine learner progress.*

3.3 Troubleshoot issues

use the data you have collected to troubleshoot issues with using AAC. Data from across contexts can be helpful to the SLP when planning next steps for the learner's use of AAC.

- 📄 *Use the AAC Troubleshooting Guide to address issues with using AAC.*

3.4 Determine next steps based on learner progress

Collecting data will help team members decide about the effectiveness of using this practice and whether the learner with autism is making progress. If a learner is making progress based upon data collected, team members should continue to use the selected strategies.

If team members determine that the learner is not making progress, consider the following:

- Is the target goal/behavior/skill well defined?
- Is the target goal/behavior/skill measurable and observable?
- Is the target goal/behavior/skill too difficult/complex? Does it need to be broken down into smaller steps?
- Has enough time been devoted to using this practice (frequency, intensity, and/or duration)?
- Was this practice implemented with fidelity?
- Does the learner need additional supports?
- Are the selected reinforcers preferred items/activities for the learner?

If these issues have been addressed and the learner with autism continues not to show progress, consider selecting a different evidence-based practice to use with the learner with autism.

---Implementation Checklist---

		Observation:				
		1	2	3	4	5
		Date:				
		Observer's initials:				
STEP 1: PLANNING						
<p>Before you start, have you...?</p> <p><input type="checkbox"/> Identified the target goal/behavior/skill...?</p> <p><input type="checkbox"/> Collected baseline data through direct observation...?</p> <p><input type="checkbox"/> Established a target goal or outcome that clearly states when the behavior will occur, what the target goal or outcome is, and how team members and/or observers will know when the skill is mastered...?</p> <p>If the answer to any of the above questions is 'No,' review the process of how to select an EBP .</p>	1.1	Determine if an AAC assessment may be appropriate for a learner				
	1.2	Conduct an AAC assessment				
	1.3	Discuss technology and AAC preferences with family and learner				
	1.4	Identify available AAC resources				
	1.5	Select additional EBPs for teaching use of the AAC system				
	1.6	Plan opportunities for the learner to use AAC				
	1.7	Identify and train team members				
	1.8	Prepare and have materials ready and available				
STEP 2: USING						
	2.1	Teach learner to use AAC device				
	2.2	Understand formalized AAC teaching approaches				
	2.3	Give reinforcement				
	2.4	Ensure consistent use of AAC across settings				
STEP 3: MONITORING						
	3.1	Collect and analyze data				
	3.2	Monitor use of AAC across settings				
	3.3	Troubleshoot issues (if needed)				
	3.4	Determine next steps based on learner progress				

---Tip Sheet for Professionals---

AUGMENTATIVE AND ALTERNATIVE COMMUNICATION IS...

- A system of communication that is not verbal/vocal including aided and unaided communication systems
- Used to increase a target goal/behavior/skill and/or to decrease an interfering/inappropriate/challenging behavior

WHY USE WITH LEARNERS WITH AUTISM?

- AAC provides an alternate means of expressive communication when a learner has limited words or verbal communication.
- AAC uses visual supports to make abstract social and communication concepts more concrete for learners with autism.
- The technology used in AAC devices may be motivating to learners with autism.

TIPS:

- Work with your entire team lead by an SLP, to conduct an AAC assessment to identify the learner's present level of communication and the best AAC device for their skills and goals.
- Involve the learner and the learner's family in discussing tech and AAC preferences.
- Explore funding options in your area for acquiring an AAC device.

INSTRUCTIONAL OUTCOMES:

- The evidence-base for this practice supports its use to address the following outcomes, according to age range, in the table below:

EVIDENCE-BASE:							
	ACADEMIC	CHALLENGING	COMMUNICATION	JOINT ATTENTION	MOTOR	PLAY	SOCIAL
0-2			Yes	Yes		Yes	Yes
3-5	Yes	Yes	Yes	Yes		Yes	Yes
6-11	Yes	Yes	Yes	Yes		Yes	Yes
12-14			Yes				
15-18			Yes		Yes		Yes

STEPS FOR IMPLEMENTING:

1. PLAN

- Determine if an AAC assessment may be appropriate for a learner
- Conduct an AAC assessment
- Discuss technology and AAC preferences with family and learner
- Identify available AAC resources
- Select additional EBPs for teaching use of the AAC system
- Plan opportunities for the learner to use AAC
- Identify and train team members
- Prepare and have materials ready and available

2. USE

- Teach learner to use AAC device
- Understand formalized AAC teaching approaches
- Give reinforcement
- Ensure consistent use of AAC across settings

3. MONITOR

- Collect data and analyze data
- Monitor use of AAC across settings
- Troubleshoot issues if needed
- Determine next steps based on learner progress

Augmentative and Alternative Communication AAC

This sheet was designed as a supplemental resource to provide basic information about this evidence-based practice for professionals working with learners with autism.

For more information about this selected evidence-based practice, please visit <https://afirm.fpg.unc.edu/>.

---Parent's Guide---

AAC

Augmentative and Alternative Communication AAC

This parent introduction to AAC was designed as a supplemental resource to help answer questions about this practice.

To find out more about how this AAC is being used with your child, please talk with:

For more information about this selected evidence-based practice, please visit <https://afirm.fpg.unc.edu/>.

WHAT IS AAC?

- AAC is a system of communication that is not verbal/vocal
- Unaided communication systems do not use any materials or technology (e.g., sign language and gestures)
- Aided communication systems use some type of material or device and can include low tech systems (e.g., exchanging objects/pictures) or high-tech systems (e.g., battery powered speech output devices).
- AAC is used to increase a target goal/behavior/skill and/or to decrease an interfering/inappropriate/challenging behavior

WHY USE THIS AAC WITH MY CHILD?

- Communication is a basic human right that is essential for student success in academic and non-academic settings.
- AAC uses visual supports to make abstract social and communication concepts more concrete for learners with autism.
- AAC can support communication across the school setting and at home.

WHAT ACTIVITIES CAN I DO AT HOME?

- Encourage use of the AAC system during all daily routines, including extra-curricular activities, on errands and to visits with friends and family.
- Use the AAC system to support choice-making at home, for example during mealtimes or leisure time.
- Use the AAC system to allow your learner to respond to questions throughout the day.

---Glossary---

AAC

Below are the key terms that apply specifically to this evidence-based practice.

For more information about this selected evidence-based practice, please visit <https://afirm.fpg.unc.edu/>.

Augmentative and alternative communication (AAC)

interventions that use a system of communication that is not verbal/vocal including aided and unaided communication systems

Augmented Input (Aided Language Modelling)

a receptive language training approach in which the communication partner provides spoken words along with AAC symbols during communication tasks

Baseline data

information gathered from multiple sources to better understand the target behavior, before using an intervention or practice; data collected on current performance level prior to implementation of intervention

Core Vocabulary Approach

an AAC teaching strategy that uses a board with commonly used vocabulary words that can be applied across settings

Expressive Communication

one's ability to communicate thoughts and feelings through words, gestures, or facial expressions

Functional Behavior Assessment

an evidence-based practice used to assist a team in understanding the function or purpose of a specific interfering behavior

Functional Communication Training

an approach that focuses on basic communication skills like expressing wants and needs for the AAC learner

High-tech AAC system

an aided-communication system or device that relies on technology such as speech-generating devices (SGDs) and applications that allow other devices (e.g., phones, tablets) to serve as SGDs

Implementation checklist

the specific steps needed to accurately follow an evidence-based practice-

Interfering behavior

a challenging behavior that interferes with the learner's ability to learn

Language Acquisition Through Motor Planning (LAMP)

an AAC teaching strategy in which the learner selects words and builds sentences on a voice output device using consistent motor plans to access vocabulary

Low-tech AAC system

an aided-communication system, material or device that requires minimal technology such as exchanging objects/pictures or pointing to letters

Modeling

an evidence-based practice that involves the learner observing someone correctly performing a target behavior

Pragmatic Organization Dynamic Display (PODD)

a system of organizing and selecting words or symbol vocabulary on a low-tech or high-tech AAC system

Peer-mediated Intervention

an evidence-based practice in which peers receive training from an adult to deliver social initiations or instructions in a way that supports the learning goals of the learner with autism

Prompting

an evidence-based practice that will assist the learner in using specific skills; prompts can be verbal, gestural, or physical

Receptive communication

one's ability to understand thoughts and feelings expressed by others through words, gestures, or facial expressions

Reinforcement

an evidence-based practice that provides feedback that increases the use of a strategy or target behavior/skill

Speech-generating device (SGD)

a high-tech AAC option that allows a person to communicate using a computer that generates an electronic voice

Team members

includes the parents, other primary caregivers, IEP/IFSP team members, teachers, therapists, early intervention providers, and other professionals involved in providing services for the learner with autism

Time Delay

an evidence-based practice used to fade the use of prompts during instructional activities by using a brief delay between the initial instruction and any additional instructions or prompts

Total Communication (TC)

a holistic approach to communication that promotes the use of all modes of communication including sign language, spoken language, gestures, facial expression, and environmental cues such as pictures and sounds

Visual Supports

an evidence-based practice that provides concrete cues that are paired with, or used in place of, a verbal cue to provide the learner with information about a routine, activity, behavioral expectation, or skill demonstration

---CEC Standards---

Below are the CEC Professionals Standards that apply specifically to Augmentative & Alternative Communication (AAC).

The CEC Standards that apply to all 28 evidence-based practices (EBPs) can be found on our website at <https://afirm.fpg.unc.edu/>.

Initial Practice-Based Standards for Early Interventionists/Early Childhood (0-5 years; CEC, 2020)

STANDARD 4: ASSESSMENT PROCESSES

4.1 Candidates understand the purposes of formal and informal assessment, including ethical and legal considerations, and use this information to choose developmentally, culturally, and linguistically appropriate, valid, reliable tools and methods that are responsive to the characteristics of the young child, family, and program

STANDARD 5: APPLICATION OF CURRICULUM FRAMEWORKS IN THE PLANNING OF MEANINGFUL LEARNING EXPERIENCE

5.1 Collaborate with families and other professionals in identifying an evidence-based curriculum addressing developmental and content domains to design and facilitate meaningful and culturally responsive learning experiences that support the unique abilities and needs of all children and families.

STANDARD 6: USING RESPONSIVE AND RECIPROCAL INTERACTIONS, INTERVENTIONS, AND INSTRUCTION

6.1 In partnership with families, identify systematic, responsive, and intentional evidence-based practices and use such practices with fidelity to support young children’s learning and development across all developmental and academic content domains.

6.2 Candidates engage in reciprocal partnerships with families and other professionals to facilitate responsive adult-child interactions, interventions, and instruction in support of child learning and development.

6.3 Candidates engage in ongoing planning and use flexible and embedded instructional and environmental arrangements and appropriate materials to support the use of interactions, interventions, and instruction addressing developmental and academic content domains, which are adapted to meet the needs of each and every child and their family.

STANDARD 6: USING RESPONSIVE AND RECIPROCAL INTERACTIONS, INTERVENTIONS, AND INSTRUCTION (CONTINUED)

- 6.4 Candidates promote young children’s social and emotional competence and communication, and proactively plan and implement function-based interventions to prevent and address challenging behaviors.
- 6.5 Candidates identify and create multiple opportunities for young children to develop and learn play skills and engage in meaningful play experiences independently and with others across contexts.
- 6.7 Candidates plan for, adapt, and improve approaches to interactions, interventions, and instruction based on multiple sources of data across a range of natural environments and inclusive settings.

STANDARD 7: PROFESSIONALISM AND ETHICAL PRACTICE

- 7.2 Engage in ongoing reflective practice and access evidence-based information to improve own practices.

Initial Practice-Based Standards for Grades K-12 (CEC, 2020)

STANDARD 2: UNDERSTANDING AND ADDRESSING EACH INDIVIDUAL’S DEVELOPMENTAL AND LEARNING NEEDS

- 2.1 Apply understanding of human growth and development to create developmentally appropriate and meaningful learning experiences that address individualized strengths and needs of students with exceptionalities.

STANDARD 3: DEMONSTRATING SUBJECT MATTER CONTENT AND SPECIALIZED CURRICULAR KNOWLEDGE

- 3.2 Candidates augment the general education curriculum to address skills and strategies that students with disabilities need to access the core curriculum and function successfully within a variety of contexts as well as the continuum of placement options to assure specially designed instruction is developed and implemented to achieve mastery of curricular standards and individualized goals and objectives.

STANDARD 4: USING ASSESSMENT TO UNDERSTAND THE LEARNER AND THE LEARNING ENVIRONMENT FOR DATA-BASED DECISION MAKING

- 4.1 Collaboratively develop, select, administer, analyze, and interpret multiple measures of student learning, behavior, and the classroom environment to evaluate and support classroom and school-based systems of intervention for students with and without exceptionalities.

STANDARD 4: USING ASSESSMENT TO UNDERSTAND THE LEARNER AND THE LEARNING ENVIRONMENT FOR DATA-BASED DECISION MAKING (CONTINUED)

4.3 Assess, collaboratively analyze, interpret, and communicate students' progress toward measurable outcomes using technology as appropriate, to inform both short- and long-term planning, and make ongoing adjustments to instruction.

STANDARD 5: SUPPORTING LEARNING USING EFFECTIVE INSTRUCTION

5.1 Candidates use findings from multiple assessments, including student self-assessment, that are responsive to cultural and linguistic diversity and specialized as needed, to identify what students know and are able to do. They then interpret the assessment data to appropriately plan and guide instruction to meet rigorous academic and non-academic content and goals for each individual.

5.2 Candidates use effective strategies to promote active student engagement, increase student motivation, increase opportunities to respond, and enhance self-regulation of student learning.

5.6 Candidates plan and deliver specialized, individualized instruction that is used to meet the learning needs of each individual.

STANDARD 6: SUPPORTING SOCIAL, EMOTIONAL, AND BEHAVIORAL GROWTH

6.2 Candidates use a range of preventive and responsive practices documented as effective to support individuals' social, emotional, and educational well-being.

STANDARD 7: COLLABORATING WITH TEAM MEMBERS

7.2 Candidates collaborate, communicate, and coordinate with families, paraprofessionals, and other professionals within the educational setting to assess, plan, and implement effective programs and services that promote progress toward measurable outcomes for individuals with and without exceptionalities and their families.

Advanced Practice-Based Standards (CEC, 2012)

STANDARD 1: ASSESSMENT

1.2 Design and implement assessments to evaluate the effectiveness of practices and programs.

STANDARD 2: CURRICULAR CONTENT KNOWLEDGE

2.2 Continuously broaden and deepen professional knowledge and expand expertise with instructional technologies, curriculum standards, effective teaching strategies, and assistive technologies to support access to and learning of challenging content.

STANDARD 3: PROGRAMS, SERVICES, AND OUTCOMES

3.1 Design and implement evaluation activities to improve programs, supports, and services for individuals with exceptionalities.

3.4 Use instructional and assistive technologies to improve programs, supports, and services for individuals with exceptionalities.
