Components of the EBP Brief Packet...

This evidence-based practice overview on Differential Reinforcement includes the following components:

1. Overview: A quick summary of salient features of the practice, including what it is, who it can be used with, what skills it has been used with, and settings for instruction.
2. Evidence-base: The DR Evidence-base details the NPDC criteria for inclusion as an evidence-based practice and the specific studies that meet the criteria for this practice.
3. Step-by-Step Guide: Use the DR Step-by-Step Practice Guide as an outline for how to plan for, use, and monitor DR. Each step includes a brief description as a helpful reminder while learning the process.
4. Implementation Checklist: Use the DR Implementation Checklist to determine if the practice is being implemented as intended.
5. Data Collection Sheets: Use the data collection sheets as a method to collect and analyze data to determine if progress is being made for a learner with ASD.
6. Tip Sheet for Professionals: Use the DR Tip Sheet for Professionals as a supplemental resource to help provide basic information about the practice to professionals working with the learner with ASD.
7. Parent Guide: Use the DR Parent Guide to help parents or family members understand basic information about the practice being used with their child.
8. Additional Resources: Use the Additional Resources to learn more about the practice.
9. CEC Standards: A list of CEC Standards that apply specifically to DR.
10. Module References: A list of numerical References utilized for the DR module.

Suggested citation:
What Are DR?

Differential reinforcement (DR) is an application of reinforcement designed to reduce the occurrence of interfering behaviors (e.g., tantrums, aggression, self-injury, stereotypic behavior). The rationale for differential reinforcement is that by (a) reinforcing the nonoccurrence or decreased occurrence of interfering behaviors or (b) reinforcing behaviors that are more functional or incompatible with the interfering behavior, then interfering behaviors will decrease.

Evidence-base

Differential reinforcement meets the evidence-based practice criteria set by NPDC with 25 single case design studies. The practice has been effective for preschool (3–5 years) to high school–age learners (15–22) with ASD. Evidence-based practices (EBPs) and studies included in the 2014 EBP report detailed how differential reinforcement can be used effectively to address: social, communication, behavior, joint attention, play, school readiness, academic, motor, and adaptive outcomes.

How Is DR Being Used?

DR can be used by a variety of professionals, including teachers, special educators, therapists, paraprofessionals, and early interventionists in educational and community-based environments. Parents and family members also can use DR in the home.

For more information, visit: www.afirm.fpg.unc.edu
The National Professional Development Center on ASD has adopted the following criteria to determine if a practice is evidence-based. The EBP Report provides more information about the review process (Wong et al., 2014). Efficacy must be established through high quality, peer-reviewed research in scientific journals using:

- randomized or quasi-experimental design studies (two high quality experimental or quasi-experimental group design studies),
- single-subject design studies (three different investigators or research groups must have conducted five high quality single subject design studies), or
- combination of evidence [one high quality randomized or quasi-experimental group design study and three high quality single subject design studies conducted by at least three different investigators or research groups (across the group and single subject design studies)].

---Evidence-base for Differential Reinforcement---

Differential reinforcement is an application of reinforcement designed to reduce the occurrence of interfering behaviors (e.g., aggression, self-injury, stereotypic behavior). Differential reinforcement meets the evidence-based practice criteria with 25 single case design studies. The practice has been effective with learners in preschool (3-5 years) to high school learners (15-22 years). Studies included in the 2014 EBP report detailed how differential reinforcement can be used effectively to address: social, communication, joint attention, behavior, school-readiness, play, motor, adaptive, and academic outcomes.

In the table below, the outcomes identified by the evidence base are shown by age of participants.

Preschool (3-5 years)

Elementary (6-11 years)

Middle (12-14 years)

High (15-22 years)

* Research which included participants in multiple age ranges.
This practice guide outlines how to plan for, use, and monitor the practice of Differential Reinforcement.

Keep in mind that Differential Reinforcement can be used to decrease inappropriate behaviors and increase appropriate behaviors.

BEFORE YOU START...

Each of the following points is important to address so that you can be sure the selected EBP is likely to address the learning needs of your student.

Have you found out more information about...?

- Established a goal or outcome that clearly states when the behavior will occur, what the target skill is, and how the team will know when the skill is mastered...

- Identifying evidence-based practices...

If the answer to any of these is “no,” review the process of how to select an EBP.

For more information, visit: www.afirm.fpg.unc.edu
Now you are ready to start...

Step 1: Planning

The planning step explains initial steps and considerations involved when using DR as an intervention for a learner.

1.1 Identify and define interfering behavior through an FBA

To assist in identifying a behavior that interferes with learning and/or daily function, team members should complete a functional behavior assessment (FBA).

Note: Check out the module on FBA for more information about this specific process.

Use the FBA Sheet (ABC Chart) to determine the function of an interfering behavior.

Team members should gather information from each other regarding the topography, frequency, intensity, location, and duration of the interfering behavior.

1.2 Select a differential reinforcement strategy

When deciding which differential reinforcement procedure to use, determine what the main goal is for the interfering behavior. If the main goal is to eliminate the behavior and not introduce a replacement, then choose DRO. If the main goal is to reduce the interfering behavior, then choose DRL. If the main goal is to substitute the interfering behavior with a more functional and appropriate behavior, then choose DRA or DRI.

- If using DRI, also select incompatible behavior.
- If using DRA, also select alternative behavior.

Use the DR Procedures Guide to select a procedure.

1.3 Collect baseline data on interfering behavior

Collect data in a variety of settings and activities to determine how often the learner with ASD is using the interfering behavior.

Data sheets will help you collect data on the interfering behavior in order to determine if the trend is stable to begin using differential reinforcement.

Use the Frequency Data Sheet to collect the frequency of an interfering behavior.

Use the Duration Data Sheet to collect the duration of an interfering behavior.

Use the Partial Interval Data Sheet to collect data on an interfering behavior during intervals.

1.4 Identify Reinforcers

If choosing a DRO or DRL strategy, the reinforcer should be of at least equal strength or motivating value at which is currently maintaining the interfering behavior.

If choosing a DRI or DRA strategy, the reinforcer should be the same type and/or equivalent to the reinforcement they received when engaging in the interfering behavior.
Step 1: Planning (continued)

1.5 Determine schedule of reinforcement

The process for determining the schedule of reinforcement is different depending on the differential reinforcement procedure.

a. Schedule of reinforcement for DRO
   1. Determine the average IRT from baseline data.
   2. Start with a slightly smaller interval than the average IRT for the initial DRO interval.

b. Schedule of reinforcement for DRL
   1. Start the initial response criterion at the average occurrences from baseline.
   2. Response criterion will continue to decrease gradually until the learner is continually engaging in the interfering behavior at the predetermined, more appropriate rate.

c. Schedule of reinforcement for DRI/DRA
   1. When first beginning to use a DRI or DRA procedure, use continuous reinforcement.
   2. Once the learner is successful, move to using an intermittent schedule and gradually thin the reinforcement schedule.

1.6 Prepare materials

Team members should make sure they have all materials needed for using differential reinforcement such as data collection sheets, timers, and reinforcers. Team members also need to determine if additional materials such as a self-monitoring chart or visuals will be used when implemented differential reinforcement procedures.

Step 2: Using

This section describes the process of implementing DR, including deliver reinforcers and addressing generalization.

2.1 Meet with the learner

DRO - Differential Reinforcement of Other Behaviors

Discuss the interfering behavior you want the learner to eliminate and explain how the learner can earn a reinforcer.

- Think about what tools you can use to help the learner understand what's being discussed at the meeting (e.g., pictures, video models).
- If other procedures will be used with DRO, introduce them to the learner.
Step 2: Using (continued)

2.1 Meet with the learner (continued)

**DRL - Differential Reinforcement of Low Rates of Behavior**
Discuss the interfering behavior you want the learner to reduce and explain how the learner can earn a reinforcer

- Think about what tools you can use to help the learner understand what’s being discussed at the meeting (e.g., pictures, video models).
- If other procedures will be used with DRL, introduce them to the learner (e.g., self-monitoring chart).
- Inform the learner about the number of instances allowed.

**DRI/DRA - Differential Reinforcement of Incompatible Behavior/Differential Reinforcement of Alternative Behavior**
Discuss the replacement behavior (incompatible or alternative behavior) with the learner and explain how the learner can earn a reinforcer

- Team members may also have to use an additional strategy such as functional communication training to teach the use of the replacement behavior.

2.2 Follow reinforcement schedule

**DRO - Differential Reinforcement of Other Behaviors**
- Deliver reinforcer if criterion is met.
- If interfering behavior occurs, reset timer or wait for next interval to try again.
- When the learner engages in the interfering behavior, inform the learner they did not earn the reinforcer and they can try again.
- To maintain the reinforcer as a motivator, make sure the learner does not have access to the reinforcer outside of being used for the DRO procedure.
- As the learner makes progress, gradually increase the DRO interval.

**DRL - Differential Reinforcement of Low Rates of Behavior**
- At the end of the interval or session if the limit is met, deliver the reinforcer.
- If the limit is not met, withhold the reinforcer and provide feedback to the learner to help the learner monitor their rate of responding. Inform the learner they did not earn the reinforcer, but that they can try again.
- As the learner makes progress, gradually reduce the number of responses allowed per session or interval. If using interval DRL, team members can also increase the duration of the interval.
Step 2: Using (continued)

2.2 Follow reinforcement schedule (continued)

DRI/DRA - Differential Reinforcement of Incompatible Behavior/Differential Reinforcement of Alternative Behavior

- If the interfering behavior occurs put the behavior on extinction or interrupt and redirect the learner to the replacement behavior.
- Deliver reinforcer when replacement behavior used and meets criterion
- If learner is successful with a continuous schedule of reinforcement, move onto an intermittent schedule.

2.3 Generalize procedure to other settings

When the interfering behavior is eliminated or predetermined criterion is met, team members should use DRO, DRL, DRI, or DRA procedures in additional settings or different times in the learner’s natural environments.

Having different team members such as teachers, the speech pathologist, and paraprofessionals use the DRO, DRL, DRI, or DRA procedure can also help generalize the intervention effects.

Step 3: Monitoring

The following process describes how interfering behaviors can be monitored and how this data can be used to guide further support of the learner.

3.1 Collect data on target behaviors

Use the same type of data collection and same data collection forms used in baseline.

Use the Frequency Data Sheet to collect the frequency of an interfering behavior.
Use the Duration Data Sheet to collect the duration of an interfering behavior.
Use the Partial Interval Data Sheet to collect data on an interfering behavior during intervals.

3.2 Adjust reinforcement schedule based on performance criteria

- If using DRO, increase the interval as the learner is successful.
- If using DRL, decrease the number of allowances as the learner is successful.
- For DRI/DRA, if using a continuous schedule move to an intermittent schedule and continue to fade reinforcers.
- If the interfering behavior is not decreasing, team members can work together to determine potential solutions to issues.
Step 3: Monitoring (continued)

3.3 Determine next steps based on learner progress

If the learner with ASD is showing progress, then continue to use differential reinforcement.

If the learner with ASD is not showing progress with differential reinforcement, ask yourself the following questions:

- Is the target skill or behavior well defined?
- Is the skill or behavior measurable and observable?
- If using DRI or DRA, does the incompatible/alternative behavior need to be taught?
- Was differential reinforcement used with fidelity?
- If using DRO, DRL, or DRI, is the reinforcer strong enough?
- If using DRA, does the reinforcer provide the same function as the interfering behavior?
- Have you tried adjusting the reinforcement schedule?
- Are all team members using differential reinforcement consistently?

If these issues have been addressed and the learner with ASD continues to not show progress, consider selecting a different evidence-based practice to use with the learner.
### Differential Reinforcement (DR) Implementation Checklist

**Before you start:**

**Have you…**

- Identified the behavior? □
- Collected baseline data through direct observation? □
- Established a goal or outcome that clearly states **when** the behavior will occur, **what** the target skill is, and **how** the team will know when the skill is mastered. □

*If the answer to any of these is “no”, refer to the “Selecting EBPs” section on the website.*

### Observation Checklist

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Observer’s Initials</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

#### Step 1: Planning

1. **Conduct a functional behavior assessment**

2. **Select a differential reinforcement strategy:** DRO, DRL, DRI, or DRA

   - Select an incompatible behavior (DRI) or alternative behavior (DRA), if applicable

3. **Collect baseline data**

4. **Identify reinforcers**

5. **Determine schedule of reinforcement**

6. **Prepare materials**

#### Step 2: Using

1. **Meet with the learner**

2. **Follow reinforcement schedule**

3. **Generalize DR (DRO, DRL, DRI, or DRA) strategy to other settings and times**

#### Step 3: Monitoring

1. **Collect and analyze data**

2. **Adjust reinforcement schedule based on performance criteria**

3. **Determine next steps based on learner progress**

---

### Select a Differential Reinforcement Procedure:

The planning steps for each differential reinforcement procedure are different. You must first decide which differential reinforcement procedure would be appropriate. Multiple options may be appropriate to try with the learner.

<table>
<thead>
<tr>
<th>Procedure</th>
<th>When to Use</th>
<th>Examples of Interfering Behavior</th>
</tr>
</thead>
</table>
| **DRO**   | Main goal is to eliminate the interfering behavior:  
- The behavior is unacceptable  
- Student has other appropriate behaviors in his/her repertoire | • Hitting peers  
• Self-injurious behaviors  
• Elopement |
| **DRL**   | Main goal is to reduce the interfering behavior:  
- The behavior is irritating or disruptive at high frequency, but could be tolerable or even appropriate if displayed less frequently  
- The behavior is non-violent  
- The behavior is not self-destructive | • Asking questions  
• Burping  
• Cursing |
| **DRI**   | Main goal is to substitute the interfering behavior:  
- There is an appropriate behavior that can’t co-exist with the interfering behavior | • Out of seat  
• Screaming  
• Verbal aggression |
| **DRA**   | Main goal is to substitute the interfering behavior:  
- There is an appropriate alternative behavior, but it could co-exist with the interfering behavior | • Screaming  
• Talk outs  
• Hitting |

Differential Reinforcement (DR) ---Professional's Guide---

Differential Reinforcement...
- is an evidence-based practice for children and youth with autism spectrum disorder (ASD) from 3-22 years old that can be implemented in multiple settings.
- can be used by teachers and team members (paraprofessionals, speech pathologists, parents) in school, community, and home environments.

Why Use?
- Differential reinforcement decreases interfering or challenging behaviors
- Differential reinforcement reinforces learners for not engaging in the interfering behavior (DRO), spending less time engaged in the interfering behavior (DRL), and/or spending time engaged in more appropriate behavior choices (DRA/DRI).

Outcomes
- The evidence–base for differential reinforcement supports the use of this practice to address the outcomes below:

<table>

TIPS:
- Collect data on the interfering behavior and establish performance criteria
- Choose a differential reinforcement procedure appropriate for both the learner and the behavior
- Reinforce the learner consistently, following the schedule of reinforcement
Differential Reinforcement

This tip sheet was designed as a supplemental resource to help provide basic information about the practice.

For more information, visit: www.afirm.fpg.unc.edu

Differential Reinforcement (DR) ---Professional’s Guide---

STEPS FOR IMPLEMENTING

1. Plan
   - Identify and define interfering behavior through an FBA
   - Select a differential reinforcement strategy
     - If using DRI, also select incompatible behavior
     - If using DRA, also select alternative behavior
   - Collect baseline data on interfering behavior
   - Identify Reinforcers
   - Determine schedule of reinforcement
   - Prepare materials

2. Use
   - Meet with the learner
   - Follow reinforcement schedule
   - Generalize selected DR strategy to other settings and times of day

3. Monitor
   - Collect data on target behaviors
   - Thin reinforcement schedule based on performance criteria
   - Determine next steps based on learner progress
This parent introduction to DR was designed as a supplemental resource to help answer basic questions about this practice.

To find out more about how DR is used with your child, speak with:

For more information visit: www.afirm.fpg.unc.edu

Differential Reinforcement (DR) ---Parent’s Guide---

This introduction provides basic information about DR.

What is DR?
- Differential reinforcement is an evidence-based practice for children and youth with autism spectrum disorder (ASD) from 3 to 22 years old.
- Differential reinforcement is a practice used to help decrease challenging behaviors that interfere with learning and daily functioning.

Why use DR with my child?
- Differential reinforcement is needed when a challenging behavior regularly interferes with your child’s safety, the safety of others, and the learning process.
- Research studies have shown that differential reinforcement has been used effectively with learners in preschool, elementary school, middle school, and high school to address behavior, social, school readiness, academic, adaptive, communication, joint attention, play, and motor outcomes.

What activities can I do at home?
- Notice when your child has a challenging behavior. Think about what happened before or after the behavior and share your notes and observations with your IEP team. This will help the team develop possible reasons for the purpose of the behavior and help choose a differential reinforcement strategy.
- Create a list of favorite activities or objects to be possible reinforcers that can be used at home or in school.
- If the same challenging behavior is happening at home and school, use the same differential reinforcement strategy in both settings.
Check out these resources to support your use of differential reinforcement.
