This evidence-based practice overview on Social Skills Training (SST) includes the following components:

1. **Overview**: A quick summary of salient features of the practice, including what it is, who it can be used with, what skills it has been used with, and settings for instruction.
2. **Evidence-base**: The SST Evidence-base details the NPDC criteria for inclusion as an evidence-based practice and the specific studies that meet the criteria for this practice.
3. **Step-by-Step Guide**: Use the SST Step-by-Step Practice Guide as an outline for how to plan for, use, and monitor SST. Each step includes a brief description as a helpful reminder while learning the process.
4. **Implementation Checklist**: Use the SST Implementation Checklist to determine if the practice is being implemented as intended.
5. **Data Collection Sheets**: Use the data collection sheets as a method to collect and analyze data to determine if progress is being made for a learner with ASD.
6. **Tip Sheet for Professionals**: Use the SST Tip Sheet for Professionals as a supplemental resource to help provide basic information about the practice to professionals working with the learner with ASD.
7. **Parent Guide**: Use the SST Parent Guide to help parents or family members understand basic information about the practice being used with their child.
8. **Additional Resources**: Use the Additional Resources to learn more about the practice.
9. **CEC Standards**: A list of CEC Standards that apply specifically to SST.
10. **Module References**: A list of numerical References utilized for the SST module.

**Suggested citation:**

What is Social Skills Training?

Social skills training (SST) refers to any adult-directed instruction in which social skills are targeted for improvement. SST typically occurs in either a group or individual format, and may also include facilitated practice in classroom settings. SST sometimes may co-occur with peer-mediated instruction and intervention (PMII) or some related use of peer models or tutors to support practice of targeted skills.

Evidence-base

Based upon the recent review, social skills training meets the evidence-based practice criteria set by NPDC with 8 single case design studies and 7 group design studies. The practice has been effective for preschoolers (3-5 years) to high school-age learners (15-22 years) with ASD. Evidence-based practices (EBP) and studies included in the 2014 EBP report detailed how social skills training can be used effectively to address: social, communication, behavior, play, and cognitive outcomes.

How is SST Being Used?

Social skills training can be used by professionals such as teachers, special educators, speech-language pathologists, paraprofessionals, counselors, and psychologists. Training could take place in a school, clinic, or other community-based setting. Parents and family members can sometimes be included in the SST efforts. Parents and family members also can be invaluable in supporting the learning, generalization, and maintenance of social skills by helping their child practice skills in the home and reinforcing the social skills they see their child using with family members and peers.

For more information visit: www.afirm.fpg.unc.edu
The National Professional Development Center on ASD has adopted the following criteria to determine if a practice is evidence-based. The EBP Report provides more information about the review process (Wong et al., 2014).

Efficacy must be established through high quality, peer-reviewed research in scientific journals using:
- randomized or quasi-experimental design studies (two high quality experimental or quasi-experimental group design studies),
- single-subject design studies (three different investigators or research groups must have conducted five high quality single subject design studies), or
- combination of evidence [one high quality randomized or quasi-experimental group design study and three high quality single subject design studies conducted by at least three different investigators or research groups (across the group and single subject design studies)].

---Evidence-base for Social Skills Training---

Social skills training is used to teach target skills and increase desired behavior. Social skills training meets the evidence-based practice criteria with 8 single case design studies and 7 group design studies. The practice has been effective with learners in preschool (3-5 years) to high school learners (15-22 years). Studies included in the 2014 EBP report detailed how social skills training can be used effectively to address: social, communication, behavior, play, and cognitive outcomes.

In the table below, the outcomes identified by the evidence base are shown by age of participants.

## Early intervention (0-2 years)

No studies

## Preschool (3-5 years)

## Elementary (6-11 years)

**Elementary (6-11 years continued)**

**Middle (12-14 years)**

High (15-22 years)

* Research which included participants in multiple age ranges.
This practice guide outlines how to plan for, use, and monitor the social skills training practice.

Keep in mind that SST can occur in either with an individual learner with ASD or in a group format.

BEFORE YOU START...

Each of the following points is important to address so that you can be sure the selected EBP is likely to address the learning needs of your student.

Have you found out more information about...?

- Identified the behavior...
- Collected baseline data through direct observation...
- Established a goal or outcome that clearly states when the behavior will occur, what the target skill is, and how the team will know when the skill is mastered...

If the answer to any of these is “no,” review the process of how to select an EBP.

For more information visit:
www.afirm.fpg.unc.edu
Now you are ready to start...

Step 1: SST Planning

The planning step explains initial steps and considerations involved to prepare for and develop a training plan for a learner with ASD.

1.1 Determine if training will be 1-on-1 or a group

Decide if the training will be conducted in an individual or group format based upon various factors including the skills and developmental level of the learner with ASD, the availability of the trainer, availability of space, and scheduling constraints.

1.2 Select peers for participation

To select peers for participation, consider if the grade level and needs of other potential participants. Also, determine if peer models will be included.

1.3 Conduct social skills assessment

Use informal and/or formal assessment methods to obtain more information about a learner’s current social competence as well as areas of need.

1.4 Select content of lessons

Consider the needs of the learner with ASD and group members (if a group format was selected). Remember large topics of instruction might include underlying components to the skill that will need to be addressed as well.

1.5 Determine format structure

SST should have a common format for each session. At a minimum, the lesson format should include a check in, introduction and teaching of a new skill, practice of the new skill, feedback, and opportunities to practice new skill outside of lesson format.

1.6 Select instructional strategies to use

A variety of instructional strategies can be used to teach social skills including direction instruction of skills, modeling, video modeling, role play, prompting, reinforcement, facilitated practice, and use of visual cues.

1.7 Prepare materials

Before you begin social skills training, you will need to prepare the materials. If you have selected any curriculum to support instruction, you will need to obtain those materials.
Step 1: SST Planning (continued)

1.8 Prepare instructors and adults to assist with training

Before beginning to use SST make sure all adults who will be leaders are familiar with the lesson plans and the reward system planned for participants.

1.9 Determine meeting place and schedule

A meeting time and place for the training needs to be selected that is convenient for both the learners with ASD, other members, and the leader.

The **SST Planning Worksheet** in the Resource section will help you plan for SST.

Step 2: Using SST

This step describes the process of using social skills training.

2.1 Implement the training as planned

Refer back to the plan for instruction or the Planning Worksheet. Consider creating session guides to plan for individual lessons.

The **Session Guide** in the Resource section will help you plan for specific training sessions.

2.2 Reinforce learner use of target skills

Reinforce learner’s use of new target skills or behaviors. Select items or activities that are reinforcing to the learner with ASD.

2.3 Support generalization of target skills

Make a plan to support a learner in generalizing skills learning in the training session to other settings, people, and activities.

2.4 Provide support to peer models if applicable

Adult leaders should provide time for peers to become familiar with the learner with ASD, review the goals and format of the training session with peers, and provide specific suggestions of what is expected from peer.
Step 3: Monitoring SST

The following process describes how the use of social skills training can be monitored and how to adjust your plan based on the data.

3.1 Collect data on learner use of target skills

Team members should collect data on target skills and behaviors. Use event recording to collect frequency data at every instance the behavior occurs. When using a group format for SST, consider collecting data using one data form.

- The Event Recording Form in the Resource Section will help you monitor behaviors with low frequency.
- The Group Data Form in the Resource Section will help you collect data on multiple learners.

3.2 Determine next steps based on learner progress

If a learner is making progress based upon data collected, team members should continue to use SST and consider using it to address additional goals.

If the target skill or behavior is not increasing, ask yourself the following questions:

- Is the target skill or behavior well defined?
- Is the target skill or behavior measurable and observable?
- Has enough time been devoted to using SST?
- Was SST used with fidelity? (Use the SST Implementation Checklist to determine fidelity.)
- Is a consistent format used for each session?
- Are instructional strategies being used consistently?
- Are reinforcers used that are motivating to the learner?

If these issues have been addressed and the learner with ASD continues not to show progress, consider selecting a different evidence-based practice to use with the learner with ASD.
## Social Skills Training (SST)
---Implementation Checklist---

### Before you start:

**Have you...**

- □ Identified the behavior
- □ Collected baseline data through direct observation
- □ Established a goal or outcome that clearly states when the behavior will occur, what the target skill is, and how the team will know when the skill is mastered.

*If the answer to any of these is “no”, refer to the “Selecting EBPs” section on the website.*

### Step 1: Planning

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1</td>
<td>Determine if training will be 1-on-1 or a group</td>

---SST Planning Worksheet---

Learner’s Name: ___________________ Date/Time: _____________
Observer(s): ________________________________________________
Target Behavior: _____________________________________________
___________________________________________________________

Social Skills Training:

Use this worksheet as a guide for planning a social skills training intervention.

Select learners:

1. Group or individual training?
   I will plan to train a (circle one): group individual
   (if individual is selected, move on to 2.)
2. Social skills training: Planning for a group
   What grade level(s) will be included: __________________________
   Needs of included student: ___________________________________
   Include peer models: ☐ Yes ☐ No

Identify social skills to target:

Identifying skills includes conducting a social skills assessment. Select any or all of the following options.

☐ Review of records and previous assessments
☐ Interviews with parents and current or recent providers
☐ Talking with the learner
☐ Observations
☐ Use of formal assessment tools
☐ Completion of skill inventories

Content of lessons:

Determine what social skill will be addressed: ________________________________

Describe the underlying components to the skill that will need to be addressed. ________________________________

_______________________________________________

_____________________________________________
Select the curriculum that will be used:

- Packaged social skills curriculum
- Adapt lessons from a packaged curriculum
- Develop own content and lessons

Determine format structure for lesson using the table below:

<table>
<thead>
<tr>
<th>Component</th>
<th>Length of Time</th>
<th>Description/Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Check in/warm up</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Introduction of new skill</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Modeling</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Practice</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Feedback</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Generalization</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Summary/notes regarding structure: ____________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

Plan for managing problem behaviors: ____________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

Social Skills Training
Proposed instructional strategies: (consider any or all of the following)

- Direct instruction of skills
- Video-modeling
- Prompting
- Use of visual cues
- Facilitated practice/practice with feedback
- Practicing with trained peers
- Modeling
- Role-play
- Reinforcement
- Stories/social narratives
- Use of a concept mastery routine

What material is needed? (select any or all)

- Curriculum materials
- Video cameras
- TV’s or monitors
- Snacks
- Games
- Specific materials required for each lesson
- Videos (DVD’s or online)
- Props
- Toys
- Other: __________________________

Who will be the instructor(s): ________________________________

Schedule of Social Skills Training:

Where will the training occur?: _________________________________

What time will the training occur?: ______________________________

Dates of training: ________________________________

For more information visit: www.afirm.fpg.unc.edu
Social skills training...
- is an evidence-based practice for children and youth with autism spectrum disorder (ASD) from 3-22 years old.
- can be conducted individually or with a group and provides adult-directed instruction in which social skills are targeted for improvement.

Why Use?
- SST has been found to effective in improving the social competence of learners with ASD.
- SST can incorporate a variety of instructional strategies such as modeling, video-modeling, role-play, prompting, and reinforcement.
- SST can promote generalization of skills through facilitated practice with feedback.

Outcomes
- The evidence-base for SST supports the use of this practice to address the outcomes below:

<table>
<thead>
<tr>
<th>Early Intervention (0-2)</th>
<th>Preschool (3-5)</th>
<th>Elementary (6-11)</th>
<th>Middle (12-14)</th>
<th>High (15-22)</th>
</tr>
</thead>
<tbody>
<tr>
<td>No studies</td>

</tr>
</tbody>
</table>

TIPS:
- Select instructional strategies such as video modeling, social narratives, prompting, and reinforcement to assist in teaching selected target behavior/skill during a training session.
- Outline the format and structure of training sessions.
- Create opportunities for learner with ASD to practice skills in a variety of settings to increase generalization.
Social Skills Training (SST) ---Tip Sheet for Professionals---

STEPS FOR IMPLEMENTING

1. Plan
   • Determine if training will be 1-on-1 or a group
   • Select peer(s) for participation if applicable
   • Conduct social skills assessment
   • Select content of lessons
   • Determine format structure
   • Select instructional strategies to use
   • Prepare materials
   • Prepare instructors and adults to assist with training
   • Determine meeting place and schedule

2. Use
   • Implement the training as planned
   • Reinforce learner(s) use of target skills
   • Support generalization of target skills to other settings/people/activities
   • Provide support to peer models if applicable

3. Monitor
   • Collect data on target behaviors
   • Determine next steps based on learner progress

Social Skills Training

This tip sheet was designed as a supplemental resource to help provide basic information about the practice.

For more information visit: www.afirm.fpg.unc.edu
This parent introduction to SST was designed as a supplemental resource to help answer basic questions about this practice.

To find out more about how SST is used with your child, speak with:

For more information visit: www.afirm.fpg.unc.edu

Social Skills Training (SST) ---Parent’s Guide---

This introduction provides basic information about social skills training.

What is SST?
- SST is an evidence-based practice for children and youth with autism spectrum disorder (ASD) from 3 to 22 years old.
- SST includes any adult-directed instruction in which social skills are targeted for improvement.
- SST can occur in either a group or individual format.

Why use SST with my child?
- SST can be used to increase social interactions, play skills, regulation of emotions, perspective-taking, and communication skills.
- Research studies have shown that social skills training has been used effectively with many age groups to achieve outcomes in the following areas: social, communication, behavior, play, and cognitive.

What activities can I do at home?
- Provide opportunities for your child to practice social interactions through role plays. For example, role play with your child saying, “hello,” to a peer or asking a peer a question.
- Provide reinforcements (such as time with a favorite toy or an activity) for your child using appropriate social behaviors.
- Create opportunities for your child to practice social skills with peers through activities such as a sports team, church group, or play group.
